

I CLAIM:

1. A headlight for motor vehicle, comprising:
a base,
a light device provided on said base, and including two light
5 members for generating and providing high beam and low beam
respectively, and

means for controlling said light members to selectively
generate and provide high beam and low beam respectively.

2. The headlight as claimed in claim 1, wherein said light
10 device includes a cover engaged onto said light members, to cover
and to shield said light members.

3. The headlight as claimed in claim 1, wherein said light
device includes two tubes coupled to said light members
respectively, for light exciting purposes.

15 4. The headlight as claimed in claim 1, wherein said light
device includes two pairs of cables coupled to said light members
respectively, for coupling said light members to electric power
source respectively.

5. The headlight as claimed in claim 1, wherein said
20 controlling means includes a control device coupled to said light
device to control said light members of said light device.

6. The headlight as claimed in claim 5, wherein said control
device includes at least one stabilizer coupled to said light members
of said light device, to stabilize said light members.

25 7. The headlight as claimed in claim 1, wherein said light
members of said light device are located at different locations
relative to said base of said light device.
